

Realistic Rubin Observatory format
compliant Light Curve $f(t)$

GRU-ODE Encoder
Converts Light Curve $f(t)$, to hidden state
sequence h , and evolves on regular time grid

Deep Sets
converts hidden state
to latent space
vectors $\vec{z}$

Decoupled Parametric Decoder reconstructs model
Light Curve $\hat{f}(t)$, from latent space vectors

Reconstructed
Light Curve $\hat{f}(t)$,
with UQ
